Custom Order Request

| Specification | 📋 Budget $2,900 |
| --- | --- |
| **Criteria** | ⏱ 7 days delivery (Jul 2, 2025) |

Hello, im looking for a quote to build a website similar to the attached picture. I did a quick mock up just to show what im looking for. Customers need to be able to log in, and I need to be able to clloect their monthly payment.

Dashboard: shows major market and stock prices along with market news. However can show specific stock news if they search the ticker

Stock Pricing Calculator: Discounted cash flow calculator. Picture attached. This is the only page I really had success building. It can be seen here: https://moneytalkrashad.net/stock-pricing-calculator/

Instant Analyzer: Essentially would give the user the ability to see if a stock meets its fundamental criterias based on what the customer picks with a click of a button. My inpiration for this is attached

Charts: Show stock charts with the option to use technical tools

Options: Show the options chain along with the expected move

Statements: shows income statement, cashflow statement, and Balance sheet

Insider Trading: Shows insider trades

Options screener

I have a devloper API key now

**Me**                                                                              Jun 25, 11:08 PM

Hello Eagrad,

Thanks for reaching out and, sending all the details and the screenshots. The calculator link is super helpful too.

I'll need a little time to look through everything properly. And, just to help me plan things better, let me know if you have a preferred platform, how you'd like to collect p-ayments, and if you have any design or colors in mind.

Once I've reviewed it all, I'll get back to you with a clear insights.

Looking forward to hearing from you.

Best regards,
Akibur.

**Me**                                                                              Jun 25, 11:34 PM

Thanks for sharing all the details, screenshots, and the link to your stock pricing calculator. I've gone through everything and now understand what you want to build.

# Here's what I see you need:

=> A platform where users can create accounts and p-ay monthly subscriptions, likely using Str-ipe or P-ayPal
=> A dashboard showing live market data like S&P 500, Nasdaq, and Dow Jones
=> Live charts and price updates for the stocks users choose
=> Stock news when someone searches for a ticker
=> A new stock pricing calculator that I will build from scratch and add to the platform
=> An instant analyzer that checks if a stock meets your key criteria, like PE ratio and revenue growth
=> A charts page with popular technical indicators like RSI, MACD, and Bollinger Bands
=> Real-time options data with expected move calculations
=> Clean financial statements like Inc-ome, Ca-sh Flow, and Balance Sheet
=> Insider trading info showing recent insider buys and sells
=> An options screener with filters for things like high volatility and unusual volume

# To give you a clear price and timeline, I have a few quick questions:

=> Which p-ayment system will you use? St-ripe, P-ayPal, or another?
=> Do you have any colors, logos, or design ideas? Or should I help create them?
=> Do you already have hosting and a domain, or should I handle deployment?

# Also, to complete the project successfully, I'll need a few things from you:

=> Access or API keys for live market data (S&P 500, Nasdaq, Dow Jones)
=> APIs or data sources for real-time options and insider trading info
=> Access to p-ayment accounts like St-ripe or P-ayPal for integration
=> Any existing branding assets, like logos or color codes, if you have them

Once I have your answers and these items, I'll send you a timeline, cost estimate, and a plan to build the most important parts first.

I'm really excited about this project because it will be very useful for investors. Once we finalize the details, we can get started right away!

Looking forward to hearing from you.

Best regards,
Akibur.

**E  eagrad2007**                                                                   Jun 26, 12:55 AM

Yes that sounds correct!
I would like to use Stripe.
Colors would be White, Black, Gold, and Green. Want site to pop and have good contrast.
I have not purchased a domain yet, however I can do that if its extra.

Here is my API Key for Alpha Vantage: apikey=HBS2VKSLJQ2DUW9Q

**Me**                                                                              Jun 26, 1:19 AM

Thank you for sharing with me deeply.

As per our discussion, we're building a clean and powerful stock analysis website where users can log in, p-ay monthly using Str-ipe, and access a bunch of useful tools to analyze stocks, view data, and make better decisions.

#Here's what the website will include:

=> A Dashboard that shows major market indexes (like S&P 500, Nasdaq, Dow Jones) along with news. Users can also search by ticker to get stock-specific news.

=> A Stock Pricing Calculator, like the one you built, to calculate a stock's value using discounted cash flow.

=> An Instant Analyzer that checks a stock based on selected fundamentals (like PE ratio, revenue growth, etc.) with just a click.

=> A Charts section to show live stock charts with technical tools like RSI, MACD, and more.

=> An Options page with the full options chain and expected move.

=> A Statements section showing income statement, ca-sh flow, and balance sheet.

=> An Insider Trading page that lists recent insider buys and sells.

=> An Options Screener to filter options by high volume, volatility, etc.

=> A Download All page to let users export reports or results.

=> A Login / Signup page for users to create and manage accounts.

=> A Profile / Settings page where users can manage their info and subscription.

And, I'll handle the full design in Figma using the colors you mentioned: white, black, gold, and green, something clean, modern, and high contrast.

Then I'll build the frontend using React, the backend using Node.js + Express, and store data with MongoDB. P-ayments will be handled with Str-ipe, and we'll pull market data using your Alpha Vantage API key. Finally, I'll deploy the site and connect it to a domain.

Here's what I'll need from you:
=> Your logo or any branding assets
=> Access to your Str-ipe account
=> Let me know if you plan to use any other APIs beyond Alpha Vantage

[ The total cost will be $5,500 (USD), and the full build will take about 65 days. (Approx.). ]

We'll split it into two phases:
<> UI/UX Design & Frontend: $2,500 (USD), will take around 30 days. (Approx.).
<> Backend & Integrations: $3,000 (USD), will take around 35 days (Approx.).

Does that sound good to you? If everything looks okay, can we go ahead and move forward with the project proposal?

In the meantime, if you'd like, we can also arrange a Fiverr Zoom call to go over and finalize everything.

Looking forward to hearing from you.

Best regards,
Akibur.

---

**E** eagrad2007                                                                                     Jun 26, 2:08 AM

Here is the logo in both white and black.
Alpha Vantage is the only API I will be using
I would need your email to add you as a developer to Stripe.
Would of course need a nice landing page to send potential buyers to

My budget for this was $3000. Can you come down? Also can this be done in 30 days total?

**Me**                                                                                                Jun 26, 2:34 AM

Thanks for sharing your logo and the details. I understand your budget is $3,000 (USD) and you want the project done in about 30 days. I totally get where you're coming from.

You might find cheaper offers elsewhere, but please keep in mind that my focus is on quality, security, and making sure your website works smoothly and grows with your business. Many clients come to me after problems with cheaper developers, like slow sites, poor design, or no support. I build with long-term success in mind.

The best way to see my skills is by checking my Fiverr portfolio. I'm a Pro Verified Vetted Developer and part of the top 1% sellers on Fiverr, and have completed over 1,300 projects across different industries. This means you get high-quality, reliable work.

That said, I'm open to negotiating. Since I'm a serious, verified seller, I don't lower the price for the full scope. But we can definitely discuss scaling down the project, removing some features or pages to fit your $3,000 budget and 30-day timeline. The quality will stay the same, just less work overall.

If you want the full original project, the $5,500 (USD) is the fair price for the work involved.

Let me know if you'd like me to suggest which parts we can cut to fit your budget or if you have any questions!

Looking forward to your thoughts.

Best regards,
Akibur.

---

**Me**                                                                                                Jun 26, 4:42 AM

Just dropping a quick note to say hello and let you know that I'm eagerly awaiting your response.

---

**E** eagrad2007                                                                                     Jun 26, 5:11 AM

I understand and respect your work. I need all the things discussed for this project. Does this include ongoing support after the site is complete?

---

**E** eagrad2007                                                                                     Jun 26, 5:17 AM

Could we meet somewhere in the middle?

---

**Me**                                                                                                Jun 26, 5:34 AM

I want to be honest with you. As a Pro Verified Vetted Developer on Fiverr and part of the top 1% sellers, I have worked very hard to reach this level. It takes a lot of experience, skill, and commitment to deliver quality work that is secure, reliable, and built to last. Many clients come to me after having bad experiences with cheaper developers, and I always focus on making sure my projects grow with the business.

Because I truly believe in your project and want to build a long-term business relationship with you, I'm willing to make a special offer. Instead of the usual $5,500 (USD) price, I can do the full project for $4,500 (USD). This means you get everything we talked about, no features removed, and the same high-quality work I'm known for.

Also, I will provide support after the site is finished. For about 60 days after launch, I'll help fix any bugs or answer your questions. If you want longer support later on, we can talk about a simple plan for that.

I hope this shows how much I want to make this work for you and start something great together.

We'll split it into two phases:
<> UI/UX Design & Frontend: $2,000 (USD), will take around 30 days. (Approx.).
<> Backend & Integrations: $2,500 (USD), will take around 35 days (Approx.).

Please let me know if all this sounds good, and let me know if we can move forward with the 1st phase of the project.

Looking forward to building this amazing platform with you.

Best regards,
Akibur.

**eagrad2007**                                                                                    Jun 26, 5:54 AM

This sounds like something I can do. I appreciate you working with me on the price. Is there anyway we can reduce the turn around time? I would like to launch it in the 1st week of August prior to an investing event

**Me**                                                                                            Jun 26, 6:11 AM

I'm really glad we're good with the budget, and I appreciate your flexibility.

About launching before the first week of August, I want to be honest with you. The full project has a lot going on, and to make sure everything works well and looks professional, we need to stick to the two phases we discussed. Trying to rush the whole thing into one short deadline just isn't realistic, and if we do, it'll lead to issues later. That's not the kind of work I do.

Each phase needs proper time. First, I'll focus on the design and frontend. After that's done, I'll move on to the backend and connect everything. That's the best way to build something solid that actually works.

If your event in August is really important, I can try to prioritize the most visible parts of the site first, like the landing page and maybe a few key sections, so you have something to show. But the full platform still needs the full timeline to be done right.

Let me know how you'd like to move forward. I want to help, just without cutting corners.

**eagrad2007**                                                                                    Jun 26, 7:13 AM

I appreciate your honesty. Lets move forward

**Me**                                                                                            Jun 26, 7:17 AM
